SUMMARY

Backend engineer with hands-on experience designing Python/Django-based automation systems, backend utilities, and AI-assisted workflows using agent-based approaches to optimize engineering operations.

EDUCATION

Madanapalle Institute of Technology & Science <i>B.Tech in Computer Science & Technology</i>	May 2024 CGPA: 7.93
Golden Valley Integrated Campus <i>Diploma in Civil Engineering</i>	April 2020 CGPA: 7.0

EXPERIENCE

Sony India Software Centre <i>Software Development Intern, Bengaluru</i>	May 2025 – Present
- Worked on AI-assisted automation and internal tooling using Python to improve internal workflow efficiency. - Implemented backend automation utilities with Python and JavaScript, focusing on clean, maintainable code. - Applied agent-based and automation concepts to streamline repetitive engineering tasks in a controlled internal environment.	
Slash Mark (AICTE) <i>Artificial Intelligence Intern (Virtual)</i>	Dec. 2023 – Apr. 2024
- Completed guided exercises and applied ML concepts in academic project work during the internship period. - Gained hands-on exposure to machine learning basics, including model training, and evaluation.	
AP Skill Development Centre (APSSDC) <i>Data Analysis Intern (Virtual)</i>	May 2023 – Jul. 2023
- Performed data preprocessing and exploratory data analysis using Python (Pandas, NumPy, Matplotlib). - Generated analytical insights and reports based on observed data patterns.	

PROJECTS

Prism AI – Agentic Resume Optimizer  <i>Python, Django DRF, Google Gemini, Celery, Redis, React</i>
- Engineered an Agentic RAG system using Google Gemini and ChromaDB to perform semantic candidate-job matching, utilizing vector embeddings to rank relevance beyond simple keyword matching. - Developed an asynchronous Optimization Engine (Celery/Redis) that intelligently detects skill gaps and autonomously rewrites resume bullet points to align with specific JD terminology.
AI-Powered Internal Developer Assistant  <i>Python, FastAPI, OpenAI API, REST APIs</i>
- Developed a backend service that assists engineers by analyzing logs and searching internal documentation to generate contextual insights using AI. - Designed API-driven workflows with strict read-only boundaries to ensure safe, reliable automation.

SKILLS

Languages: Python, Java, SQL, HTML/CSS
Frontend: React.js
Frameworks & Backend: Django, REST APIs, FastAPI
AI & Automation: AI Agents, OpenAI API, RAG, Selenium, Appium
Tools: Git/GitHub, Postman, Linux/Unix Shell, VS Code, PyCharm

CERTIFICATIONS & ACHIEVEMENTS

Python Full Stack Development Certification <i>[JSspiders Hebbal]</i>	May 2024 – Apr 2025
Selected for TCS Ninja (2024); completed AICTE-backed internships in AI and automation.	
Interests: Backend Engineering, AI Agents, Open-Source Learning, and studying the Japanese language.
