

MOHAMMED HAYATH

BACKEND DEVELOPER

snmdhayat@gmail.com , [+919642210782](tel:+919642210782) , Bengaluru, India , amdhayath.dpdns.org , linkedin.com/in/snmdhayath , github.com/amohammedhayath

SUMMARY

Backend engineer with hands-on experience building and maintaining Python-based microservices, automation systems, and asynchronous workflows for enterprise applications. Experienced in developing REST APIs, distributed task processing, and database solutions, with a growing focus on LLM integrations and scalable cloud-native architectures for production environments.

EXPERIENCE

Software Development Intern
Sony India Software Centre

May 2025 - June 2026
Bengaluru, India

- Contributed to a Python-based automation framework, enhancing its scalable architecture to support testing workflows across distributed systems and multiple platforms.
- Developed AI-assisted BDD automation features, leveraging LLM integrations and prompt engineering to convert natural language test scenarios into structured Gherkin-format test cases.
- Implemented backend utilities, API workflows, and automation components using Python, emphasizing maintainability and adhering to API contracts for workflow efficiency.

EDUCATION

Madanapalle Institute of Technology & Science
Bachelors in Technology (Computer Science)

Nov 2020 - May 2024

Golden Valley Integrated Campus
Diploma in Civil Engineering

Jul 2017 - Apr 202

PROJECTS

Prism AI - Agentic Resume Optimizer

github.com/amohammedhayath/Prism-AI prisms-ai.vercel.app

Full Stack Developer

- Built a scalable backend system for LLM-driven semantic job-candidate matching, utilizing vector embeddings and structured ranking logic for optimized recommendation relevance, akin to vector databases.
- Designed a distributed asynchronous processing pipeline utilizing Celery and Redis, demonstrating scalability concepts to handle large-scale, concurrent resume optimization workflows.
- Implemented strong background task management with retries and queue handling, showcasing distributed systems principles and coordination mechanisms to ensure reliability of AI-driven operations.

AI-Powered Internal Developer Assistant

github.com/amohammedhayath/AgenticQA

Full Stack Developer

- Developed a FastAPI-based service incorporating LLM integrations and tool calling patterns to analyze logs and retrieve relevant internal documentation via AI-driven workflows.
- Designed controlled, read-only execution pipelines, applying agent orchestration patterns and task decomposition to ensure safe and reliable automation of engineering insights while mitigating model limitations.
- Built an API-driven architecture for contextual response generation, leveraging prompt engineering and structured outputs to reduce manual debugging effort for developers, and supporting potential conversational UI integration.

SKILLS & AWARDS

- Technical Skills:

Python, FastAPI, LLM integrations, Multi-agent architectures, LangChain, LangGraph, Distributed systems, Scalability concepts, Redis, Vector databases, WebSockets, Prompt engineering, Structured outputs, Tool calling patterns, Agent orchestration patterns, Role-based agents, Task decomposition, API contracts, Schema-driven development, Optimization, Angular, React, RxJS, Azure, Azure GitHub, Cosmos DB, MongoDB, Git, GitHub, Python, Java, SQL, Django, FastAPI, REST APIs, OpenAI API, RAG, Git, GitHub, Linux/Unix, Postman
- Languages:

English, Telugu, Urdu, Hindi, Japanese(learning)
